Roadmap 2006

What you can expect this year...

Software development is a continuous process. Products are never finished and we will always try to improve our systems even further.

We would like to take this opportunity to give you an overview of the improved and new systems we released last year and share what can be expected in 2006.

In 2006 we will continue travelling the path we have chosen in the last years and focus on the integration of the various channels of data collection, database support, usage of access panels and advanced dialling solutions.

Some of the highlights you can expect us to release in 2006 are:

- **NIPO FMS including CAPI**
Integration of the CAPI channel in NIPO FMS, next to CATI and CAWI. The integration includes switching from CAPI to another channel and vice versa. Interviewer planning for CAPI will be implemented (CATI already available).
- **Online Panel**
The first version of NIPO Panel with an online interview module (currently NIPO Panel works offline).
- **NIPO CAPI Client**
The new .NET based CAPI Client for laptops, Tablet PC's, ultra mobile PC's and PDA's.
- **Data entry**
The first version of our data entry module that will be part of the NIPO Fieldwork System for CATI/Web Interviewing.
- **NIPO Fieldwork System for CATI/Web Interviewing**
Key words: Virtual Call Centre, smart sample management and Scalability & Stability. Survey specific permissions can be given in the Manager and FMS; enabling working on different locations.

Looking back on 2005....

In 2005 various new products have been released, including the following:

- **NIPO Fieldwork System for CATI/Web Interviewing 1.05**
The most important features include editing Sample records while survey is running, the option to show stratification (quota) overviews to the CATI Client (interviewer), JavaScript in Web Client, easier web-interface, allowing keyboard input, better focus handling and improved language support..
- **NIPO Diamond Portal System 1.3**
The latest version of our on-line reporting instrument that contains a tabulation package, a fieldwork overview module and administrative tools. The latest version includes the interactively defining of filters and the support of multiple data locations.
- **NIPO Conjana 1.2**
The latest version of our conjoint analysis program.

A complete overview of all the new features of the latest releases can be found in the product documentation.

Last year NIPO Software also opened a Helpdesk in the Asia Pacific region. Recognizing the need of our clients for support in their own time zone, NIPO Software has opened the support center in Hong Kong on 1 January 2006. Kees Varekamp, who worked for several years at the NIPO Software Helpdesk in Amsterdam, will manage the Asia Pacific Helpdesk for the first year.
